

Project Update Wolf River Boulevard

Prepared By: Drake Danley, P.E. – Kimley-Horn and Associates, Inc.
Update Number: 1
Date: June 6, 2011
Last Report: N/A
Project No.: 79954-3537-54, STP-M-9420(1)
PIN: 101615.00
Prime Contractor: Acuff Enterprises, Inc. dba Scott Contractors

The information that follows is intended to provide an outline of recent and upcoming construction activities for inclusion in a project update to be released to the general public. It is not intended to be a complete summary of all activities performed by the contractors, city staff, or consultant staff. For that reason, administrative activities such as meeting attendance, submittal reviews, recordkeeping, contract revisions, etc, have been omitted.

Work performed since the last update:

- Clearing and grubbing of existing site
- Installation and maintenance of erosion control devices
- Installation of temporary channel crossings
- Hauling and mass grading of site
- Installation of 12'x17' Box Culvert at Sta 21+33
- Demolition of existing sewer siphon
- Installation of traffic signal interconnect conduit off site (trenching)

Work expected to be performed this month:

- Continue clearing and grubbing of existing site
- Continue maintenance of erosion control devices
- Continue hauling and mass grading of site
- Continue installation of 12'x17' Box Culvert at Sta 21+33
- Installation of new sewer siphon
- Installation of traffic signal interconnect conduit off site (jack and bore)
- Rough installation of temporary traffic signal at Kimbrough

Items of significant interest to the general public:

1. Temporary Traffic Signal Installation

A traffic signal will soon be installed at the intersection of Wolf River Boulevard and Kimbrough Road. The traffic signal will allow for the safe passage of trucks and equipment into and out of the Wolf River Boulevard construction site. Traffic will be impacted in the following ways:

Westbound Wolf River Boulevard

Westbound Wolf River Boulevard traffic will be reduced to two lanes in the vicinity of the Kimbrough intersection, but will always have a "green light" to continue traveling south

on Kimbrough Road. Westbound vehicles attempting to enter the construction site will be stopped by a red light.

Northbound Kimbrough Road

Northbound Kimbrough Road traffic will be occasionally stopped by the traffic signal to allow trucks to enter the construction site. The intent will be to minimize the disruption to northbound traffic. Northbound traffic will be reduced to two lanes in the vicinity of this intersection.

All motorists travelling in the vicinity of this intersection should use caution and be aware of construction truck movements into and out of the site. The temporary traffic signal at this location will eventually be replaced by a permanent signal to control traffic on all legs of the intersection.

2. *Access to the Medical Office Complex north of Wolf River Boulevard at Kimbrough*

When the traffic signal and other traffic control devices are installed on Wolf River Boulevard, access from the medical office complex on the north side of Wolf River Boulevard will be temporarily changed. Entrance to the complex will still be provided in two locations as it is now. Traffic leaving the complex wishing to travel south on Kimbrough Road **must** exit the site from the western driveway. Traffic leaving the site at the eastern driveway will only be allowed to turn right to travel west on Wolf River Boulevard. No left turns out of this driveway will be allowed, and the lane will be barricaded. Left turns are being prohibited at the eastern driveway due to the driveway's proximity to the construction entrance. Full access at this location will be restored when the project is complete.

3. *Traffic Control at Wolf River Boulevard and Farmington Intersection*

The traffic control measures currently in place at the intersection of Wolf River Boulevard and Farmington Boulevard are expected to remain in place for the foreseeable future. Eastbound Farmington Boulevard traffic has been channeled to the two right hand lanes in this area. Trucks exiting the construction site will use the left lane and will be merging with southbound Wolf River Boulevard traffic. All motorists travelling in the vicinity of this intersection should use caution and be aware of construction truck movements into and out of the site.

4. *Trail Access*

All walking and running trails in the vicinity of the Wolf River Boulevard construction site have been closed, and signs have been posted warning the public to stay out of the site. Please respect these signs and stay out of the construction area, not only for your safety but also for the safety of the workers on site. There are an abundance of alternate trails that remain open for public use in the surrounding area. We encourage you to use them!
